

QUALITY POLICY

Calcasieu Bridge Partners (CBP) and Louisiana Bridge Builders (LBB) adopt a comprehensive Quality Management System (QMS) to ensure the consistent achievement of results, with a strong focus on excellence and continuous improvement across all processes related to the I-10 Calcasieu Bridge Project.

This commitment is grounded in core values such as technical excellence, consistency in execution, compliance with applicable requirements, social responsibility, health and safety protection, respect for individuals, teamwork, environmental stewardship, climate change impact, and the promotion of open innovation to develop cutting-edge solutions. These principles are further articulated through the following values:

1. Leadership and Commitment

Demonstrating strong leadership and organizational commitment to quality by not only meeting the needs and expectations of the client and other stakeholders but also striving to continuously enhance their satisfaction.

2. Continuous Improvement Culture

Fostering a culture of continuous improvement that encourages employees and subcontractors to uphold quality commitments, seek innovative solutions, and share knowledge.

3. Quality Advocacy

Promoting a quality-driven mindset throughout the organization, its supply chain, and all environments in which activities are conducted.

4. Operational Excellence

Applying best practices in all activities to ensure quality, reliability, and safety of the work delivered to customers and end users.

5. Prevention-driven Approach

Prioritizing prevention over detection by embedding quality controls throughout the entire project lifecycle from design through construction to maintenance.

6. Regulatory and Contractual Compliance

Ensuring compliance with contractual obligations, legal requirements, and other subscribed standards related to quality, environmental protection, occupational health and safety, road traffic safety, and workplace well-being.

7. Systematic Quality Management

Implementing and updating a robust Quality Management System aligned with best industry practices, maintaining traceability of materials and processes throughout the project lifecycle, with accurate recordkeeping to support compliance, audits, and continuous improvement.

8. Engagement and Participation

Encouraging open communication, consultation, and active participation of workers and their representatives in all matters related to the Quality Management System.

9. Competency of Resources

Ensuring that all personnel involved in project activities are properly qualified and trained, with competency maintained through continuous development.

10. Strategic Integration

Embedding quality values into the project's strategic direction and operational progress through process-based management and the establishment of measurable objectives.

This policy is disseminated to all CBP and LBB personnel, subcontractors, and suppliers, and is made available to all relevant workplace parties as appropriate. It serves as a guiding framework for achieving excellence in every aspect of the project.
